

Ashwin Gokhale

New York, NY/Remote | (925) 548-6767 | ashwin.gokhale98@gmail.com | linkedin.com/in/ashwin-gokhale

Senior Software Engineer with 6+ years building distributed systems and platform infrastructure. Owner of developer experience for the 100+ engineers building Microsoft's incident management product.

Work Experience

Microsoft Redmond, WA/Remote
Senior Software Engineer March 2025 – Present

- Reduced partner onboarding time from 3 weeks to 1 hour with a sandboxed plugin system on React, ASP.NET, and SQL Server that lets 4 organizations deploy and host 6 production plugins independently.
- Cut ingestion P99 latency from 5s to 1s by replacing a custom 5 resource pipeline with native Data Share, now 18 months at 100% uptime moving 1M documents/day from Cosmos DB to Azure Data Explorer.
- Corrected incident response metrics product wide (time to detect, engage, mitigate) by replacing manual data entry with 50K automatic postmortem updates/day from 200K Kafka events/hour at 4s P99 lag.
- Scaled releases from 1/week to 10/day by creating a platform that hosts and deploys 16 React apps in 12 public, sovereign, and air-gapped clouds, active/active with zero downtime failover on and off Azure.
- Standardized how 40+ Azure products measure engagement by unifying UI, telemetry, and information architecture, then led 2 engineers to visualize those metrics in-app beside the components they measure. Used daily by 1K+ engineers, PMs, designers, and Microsoft's C-suite.
- Reclaimed 317 pipeline hours/week for 100+ engineers by adding job sharding and task caching to CI for the Nx monorepo and its Module Federation model, a 79% build time drop from 120 to 25 minutes.

Software Engineer II December 2021 – March 2025

- Started the team's .NET migration with its first ASP.NET Core microservice, decoupling incident and postmortem domains and serving 60K requests/day. Rewrote the shared libraries for 10 more services.
- Shipped an AI copilot to private preview in 2 months, now at 18K MAU, by directing 2 engineers and 6 teams across 4 organizations to bring agentic incident workflows directly into the product's portal.
- Cut load time from 6 to 1.5 seconds and increased monthly CSAT score from 3.62/5 to 4.10/5 by leading 5 engineers to move the platform's most used page (65K DAU) from Angular to React. Turned the migration into standards and scaffolding that grew from 4 teams to 9, mentoring 15 engineers.
- Saved 8 hours of PR build time/day and 2 weeks of manual audits/quarter by moving 418 E2E tests from Cypress to Playwright, adding WCAG 2.1 AA checks across 11 apps, 5 teams, and 3 organizations.

Software Engineer I February 2020 – December 2021

- Established the foundation all 16 portal apps now run on by shipping the platform's first React microfrontend, rebuilding a 13 page KnockoutJS app and writing 70% of it alongside 2 engineers.

Bloomberg L.P. New York, NY
Software Engineer Intern May 2019 – August 2019

- Served 75K requests/second of compiled HTML, JavaScript, and CSS templates by replacing vendor newsletter rendering on bloomberg.com with a TypeScript microservice backed by Redis and MySQL.

Object Edge Walnut Creek, CA
Software Engineer Intern May 2017 – August 2017

- Powered product recommendations with a realtime customer intent microservice handling 5K requests/second on Java, Kafka, Redis, and Docker.

Skills

Languages & Backend: C#/.NET | ASP.NET Core | TypeScript/Node.js | Java | SQL/KQL | OData/REST
Cloud & Data: Cosmos DB | Azure Data Explorer (Kusto) | Kafka | Redis | Docker | SQL Server | MySQL
Frontend & Testing: React | Angular | Nx | Module Federation | Jest | Playwright

Education

Purdue University West Lafayette, IN
(B.S.) Computer Science – GPA: 3.79 August 2016 – December 2019
