

Ashwin Gokhale

New York, NY/Remote | (925) 548-6767 | ashwin.gokhale98@gmail.com | [linkedin.com/in/ashwin-gokhale](https://www.linkedin.com/in/ashwin-gokhale)

Senior Software Engineer with 6+ years building distributed systems and platform infrastructure. Owner of developer experience for the 100+ engineers building Microsoft's incident management product.

Work Experience

Microsoft Redmond, WA/Remote
Senior Software Engineer March 2025 – Present

- Cut ingestion P99 latency from 5s to 1s by replacing a custom 5 resource pipeline with native Data Share. Moved 1M documents/day from Cosmos DB to Azure Data Explorer with 100% uptime over 18 months.
- Corrected incident response metrics product wide (time to detect, engage, mitigate) by replacing manual data entry with 50K idempotent postmortem updates/day from 200K Kafka events/hour at 3s P99 lag.
- Reduced partner onboarding time from 3 weeks to 1 hour with a sandboxed plugin system on React, ASP.NET, and SQL Server that lets 4 organizations deploy and host 6 production plugins independently.
- Scaled releases from 1/week to 10/day and cut global rollforward/rollback from 20 to 3 minutes by decoupling frontend and backend hosting. Operated the platform for 16 apps in 12 public, sovereign, and air-gapped clouds, with active/active origins on and off Azure and zero downtime auto-failover.
- Standardized how 40+ Azure products measure engagement by building a shared framework unifying UI, telemetry, and information architecture. Led 2 engineers to visualize those metrics in-app beside the components they measure. Used daily by 1K+ engineers, PMs, designers, and Microsoft's C-suite.
- Reclaimed 317 pipeline hours/week for 100+ engineers by cutting build time from 120 to 25 minutes. Owned the Nx monorepo, adding CI job sharding, caching, test optimization, and change detection.

Software Engineer II December 2021 – March 2025

- Started the team's .NET migration with its first ASP.NET Core microservice, decoupling incident and postmortem domains and serving 60K requests/day. Rewrote the shared libraries for 10 more services.
- Shipped an AI copilot to private preview in 2 months, now at 18K MAU, by designing and implementing its portal integration, leading 2 engineers, and coordinating validation across 6 teams in 4 organizations.
- Cut load time from 6 to 1.5 seconds and increased monthly CSAT score from 3.62/5 to 4.10/5 by leading 5 engineers to move the platform's most used page (65K DAU) from Angular to React. Created migration standards and scaffolding, growing adoption from 4 teams to 9 and mentoring 15 engineers.
- Saved 8 hours of PR build time/day and 2 weeks of manual audits/quarter by moving 418 E2E tests from Cypress to Playwright, adding WCAG 2.1 AA checks across 11 apps, 5 teams, and 3 organizations.

Software Engineer I February 2020 – December 2021

- Established the foundation for all 16 portal apps by building the platform's first React microfrontend.

Bloomberg L.P. New York, NY
Software Engineer Intern May 2019 – August 2019

- Served 75K requests/second of compiled HTML, JavaScript, and CSS templates by replacing vendor newsletter rendering on bloomberg.com with a TypeScript microservice backed by Redis and MySQL.

Object Edge Walnut Creek, CA
Software Engineer Intern May 2017 – August 2017

- Powered product recommendations with a realtime customer intent microservice handling 5K requests/second on Java, Kafka, Redis, and Docker.

Skills

Languages & Backend: C#/.NET | ASP.NET Core | TypeScript/Node.js | Java | SQL/KQL | OData/REST
Cloud & Data: Cosmos DB | Azure Data Explorer (Kusto) | Kafka | Redis | Docker | SQL Server | MySQL
Frontend & Testing: React | Angular | Nx | Module Federation | Jest | Playwright

Education

Purdue University West Lafayette, IN
(B.S.) Computer Science – GPA: 3.79 August 2016 – December 2019
