

Ashwin Gokhale

New York, NY/Remote | (925) 548-6767 | ashwin.gokhale98@gmail.com | linkedin.com/in/ashwin-gokhale

Professional Summary

Senior Software Engineer with 6+ years building distributed systems and platform infrastructure. Owner of developer experience for the 100+ engineers building Microsoft's incident management product.

Work Experience

Microsoft Redmond, WA/Remote
Senior Software Engineer March 2025 – Present

- Architected the platform for serving and deploying 16 React microfrontends across 12 public, sovereign, and air-gapped clouds, scaling releases from 1/week to 10/day. Runs active/active on and off Azure with zero downtime automatic disaster recovery, and shareable URLs that load any build into any environment.
- Shipped a React framework standardizing UI, telemetry, and information architecture across 40+ Azure products, then led 2 engineers to build a visualization layer showing engagement metrics beside each auto-instrumented component. Used daily by 1K+ engineers, PMs, designers, and Microsoft's C-suite.
- Built a sandboxed plugin system on React, ASP.NET, and SQL Server that lets 4 partner organizations host and deploy 6 production plugins independently, cutting onboarding from weeks to 5 minutes.
- Redesigned data ingestion from Cosmos DB to Azure Data Explorer, replacing a custom 5 resource pipeline with a native Data Share integration and cutting failure modes, on-call burden, and cloud spend.
- Owned the Nx monorepo, Module Federation model, and CI/CD used by 100+ engineers, applying job sharding and caching to cut build time 79% (120 to 25 minutes) and pipeline time 400 to 83 hours/week.

Software Engineer II December 2021 – March 2025

- Introduced the product's first ASP.NET Core microservice, decoupling the incident and postmortem domains and rewriting the shared libraries that let 10 more of the team's services migrate to .NET.
- Led and mentored 5 engineers migrating the platform's most used page (65K DAU) to React, cutting load time from 6 to 1.5 seconds and raising monthly internal CSAT from 3.62 to 4.10 out of 5. Generalized the work into standards and scaffolding, mentoring 15 more engineers as adoption grew from 4 teams to 9.
- Directed 2 engineers on an AI copilot that embeds agentic incident management tools directly in the portal for on-call engineers. Reached private preview in 2 months and now serves 18K MAU.

Software Engineer I February 2020 – December 2021

- Eliminated a proxy service with a single sign on token exchange that converts the Microsoft Teams Azure AD token into an internal JWT, letting the embedded Teams app call backend APIs directly.
- Launched the platform's first React microfrontend by migrating a 13 page KnockoutJS app with 2 engineers, writing 70% of the code and creating the infrastructure behind all 16 portal applications.

Bloomberg L.P. New York, NY
Software Engineer Intern May 2019 – August 2019

- Replaced vendor newsletter rendering on Bloomberg.com with a TypeScript microfrontend backed by a Redis and MySQL service serving compiled HTML, JavaScript, and CSS at up to 75K requests/second.

Object Edge Walnut Creek, CA
Software Engineer Intern May 2017 – August 2017

- Developed a realtime customer intent microservice on Java, Kafka, Redis, and Docker serving 5K requests/second, improving product recommendations.

Skills

Languages & Backend: C#/.NET | ASP.NET Core | TypeScript/Node.js | Java | SQL/KQL | OData/REST
Cloud & Data: Cosmos DB | Azure Data Explorer (Kusto) | Kafka | Redis | Docker | SQL Server | MySQL
Frontend & Testing: React | Angular | Nx | Module Federation | Jest | Playwright

Education

Purdue University West Lafayette, IN
(B.S.) Computer Science – GPA: 3.79 August 2016 – December 2019
